

Setup Wrapper

The Setup Wrapper was developed to make the installation of setups, consisting of several packages, transparent for the user. For the user, this means that, during the installation, he is continually informed of the package currently being installed, of which packages have already been installed and which packages are awaiting installation.

Benefits

Benefits when using the Setup Wrapper:

- Installation process is transparent for the user.
- Installation packages are pre-defined in a configuration file (xml)
- The background image of the Setup Wrapper can be freely defined (JPG, PNG, BMP or GIF). If different background images are held for different screen resolutions they will be recognized and used accordingly.
- Size and position of the task list can be defined as well as the font, size and color of the displayed text.

- As well as the work directory, interface parameters and various other settings, different ExitCodes can also be defined e.g. 0 and 3010.
- The Setup Wrapper produces a comprehensive log file which can be subsequently analyzed.

System prerequisites

- Windows 2000 SP4 or later
- Microsoft .NET Framework 1.1 or later
