

## AeX User Inventory

The AeX User Inventory Tool is a Windows application based on the Microsoft .NET Framework 1.1. This program's prime function is to create inventory data that has previously been entered by a user in an appropriate input screen.

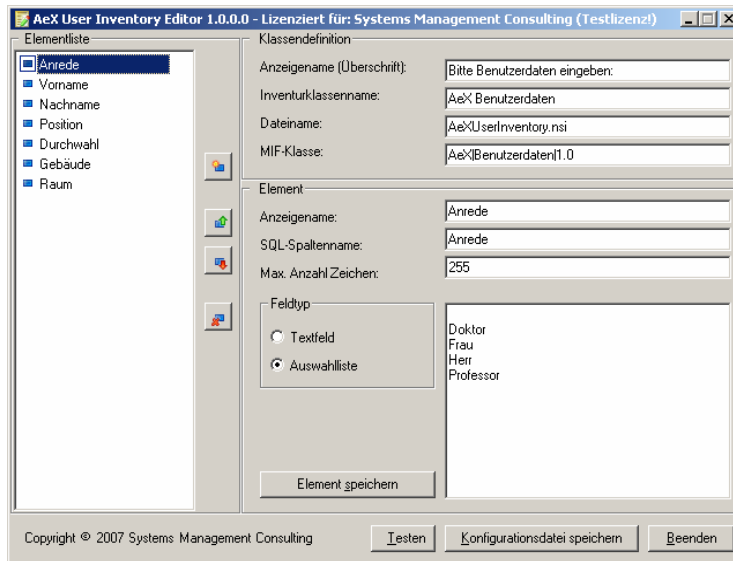

However, the fields for the mentioned inventory data are not static, but rather they can be defined in advance by the administrator by means of the AeX User Inventory Editor. Two field types are available for this: a text box for simple text entries and a ComboBox (drop-down list) for selecting pre-defined character strings. The latter can also be used to handle Boolean values or radio buttons.

The screenshot shows a Windows application window titled "AeX User Inventory 1.0.0.0". The main content area is titled "Bitte Benutzerdaten eingeben:" and contains a form with the following fields:

Anrede:	[Dropdown menu]
Vorname:	Klaus
Nachname:	Mustermann
Position:	Abteilungsleiter
Durchwahl:	4711
Gebäude:	Gebäude 5
Raum:	Raum 1

At the bottom of the window, there is a license notice: "Lizenziert für: Systems Management Consulting (Testlizenz!)" and "Copyright © 2007 Systems Management Consulting". Two buttons are located at the bottom right: "Speichern" and "Beenden".

## Benefits

Benefits when using the AeX User Inventory:

- The user can capture inventory information and have it transferred to the Altiris Notification Server.
- The administrator can define fields and selection lists in advance via the AeX User Inventory Editor.
- Full integration in the Altiris Inventory Solution and Software Delivery Solution.

## System prerequisites

- Windows 2000 SP4 or later
- Microsoft .NET Framework 1.1 or later
